

Estas llantas están hechas de Aluminio 6061-T6 que es un aluminio endurecido. Aleación llamada aleación 61S que fue desarrollada en 1935. las principales propiedades del 6061-T6 son: buena Resistencia mecánica, buena resistencia a la corrosión y buena ductilidad.

Pero ¿por qué elegir una llanta forjada? Hay 3 formas de hacer una rueda pero al tener un vehículo de alto rendimiento LAS RUEDAS FORJADAS PWR son lo que Estás buscando.

Las llantas se fabrican en un forma más individualizada pieza de aluminio sólido es calentado y moldeado usando máquinas presurizadas para darles su forma y función. Estas llantas obtienen su nombre del "proceso de forjado" de una pieza de aluminio compacto mecanizado con maquinas computacionales que trabajan en 5 ejes. Los diseños atemporales son combinado con una moderna fabricación logrando ser 3 veces más fuerte que el resto de las llantas y un 25% más ligeras.
